

Python Installation Guide

1. Download Python

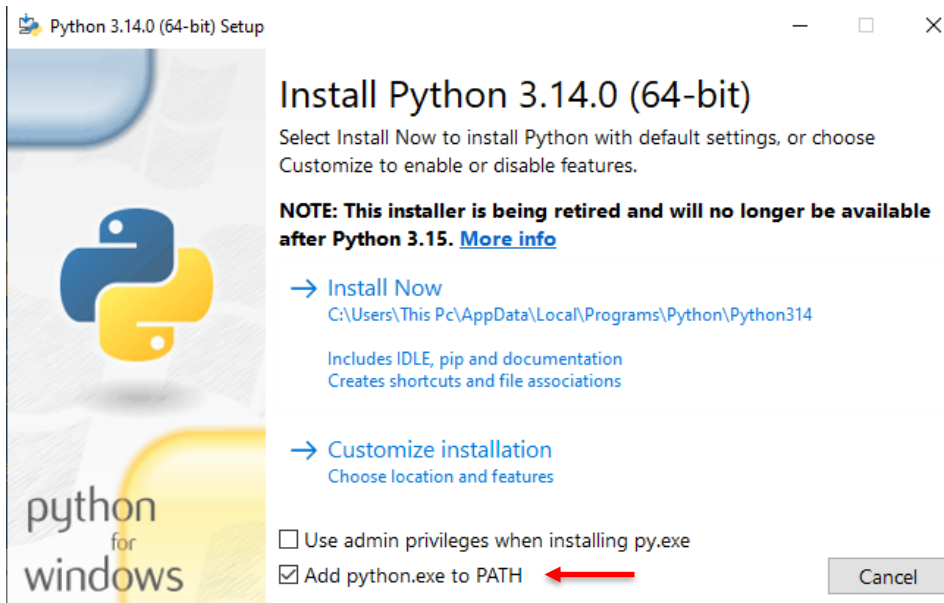

1. Open your web browser.
2. Visit the official Python website: <https://www.python.org>.
3. Hover on the 'Downloads' menu.

4. Click the latest version of python. (here Python 3.14.0)

2. Run the Installer

1. After downloading, open the installer file.
2. Check the box that says 'Add python.exe to PATH'.

3. Click on 'Install Now'.
4. Wait for the installation to complete.

3. Verify the Installation

After installation, verify Python by following these steps:

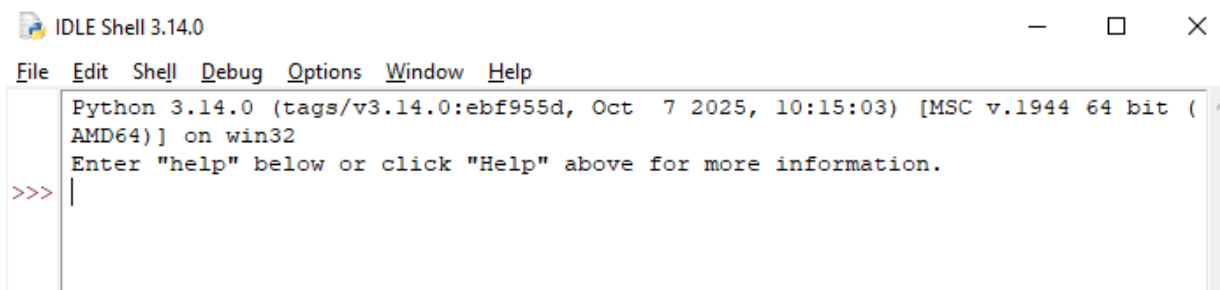

1. Open Command Prompt (Windows) or Terminal (Mac/Linux).
2. Type: `python --version`
3. You should see the installed Python version displayed. 🐍

Ways to run a python program

1. Using Python IDLE – Interactive Mode

Steps

1. Open **IDLE**
(Search “IDLE” in Start Menu on Windows, or run ‘idle’ on Mac/Linux)
2. You will see the **Python Shell** (looks like this):

3. Type this command.

```
>>> print("Hello World")
```
4. Press enter and you will see the output. 🎉

2. Using Python IDLE – Script Mode

Steps:

1. Open IDLE.
2. Click on:
3. A blank editor will open.

File → New File

4. Type python command

```
>>> print("Hello World")
```
5. Save the file:

File → Save → hello.py (Ctrl + s)

6. Run the program:

Run → Run Module (F5)

7. You will see the output 🍌

3. Using Command Prompt or Terminal

Steps:

1. Open command prompt and navigate to directory containing your python file.
2. Run the following command:

```
python file_name.py
```

4. Using Jupyter Notebook

Steps:

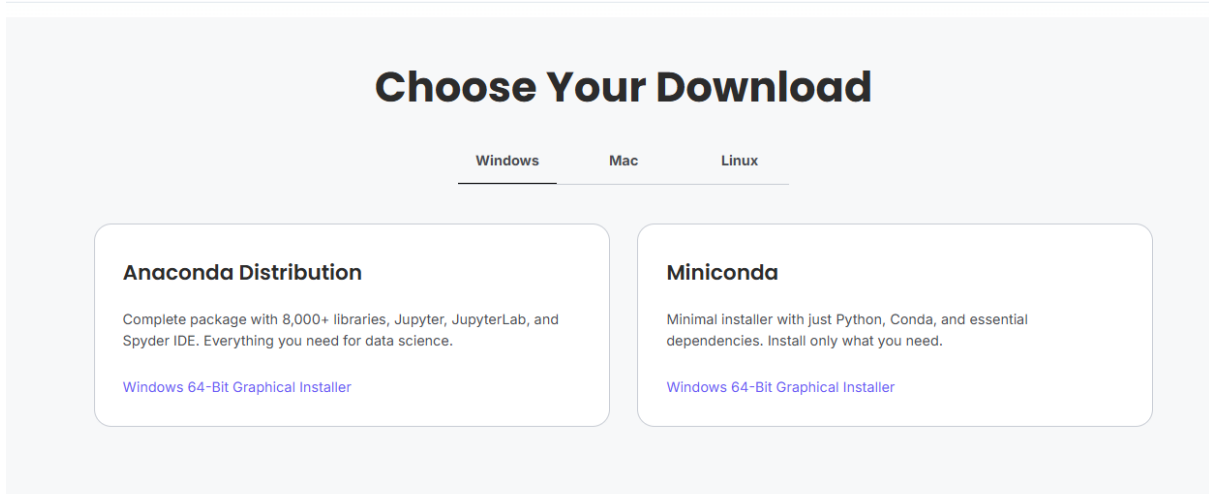

1. Download Anaconda:
 - Open official website: <https://www.anaconda.com/download>
 - Scroll down to find Miniconda Installer

Miniconda Installer

Miniconda is a free minimal installer for conda. It is a small bootstrap version of Anaconda that includes only conda, Python, the packages they both depend on, and a small number of other useful packages (like pip, zlib, and a few others).

[Download Miniconda Installer >](#)

- Click on “Download Miniconda Installer”.
- It will open another page.

- Download appropriate installer.

2. Install Anaconda

- Open installer
- Click Next
- Agree to License Agreement
- Select Installation Type: Just Me (recommended)
- Choose installation location
- Select Add to **PATH** environment variables.
- Click on install.

3. Open Jupyter notebook

- Open Anaconda Navigator from start menu.
- Look for Jupyter Notebook
- Click Launch. (it opens your system’s default user folder)

4. Alternate way

- Open anaconda prompt.
- Go to directory which you want to open in Jupyter notebook
- Type this command and press enter
'jupyter notebook'
